Dear E.

72

4th Jan.

I find I have no male
Californian Corypha.

I did not see anything
in my coll. herbarium worth
sending you now, or I would
have sent the genus across,

I post you to-day evi-
dence about Parry's annual.

I think of writing
important about Lomatia-
ceae - stems.

I have had. Might
pack up & I have
despatched a parcel
containing Lomataceae
& Wall's Oregon coll. —

I wrote. & all the other

Return for distribution.
But you may as well
retain your own set -
picking it out for yourself.

I have here not been
out ~~Yester~~ now for a
~~full week~~ week
- on account of tremendous
cold or lungs, & harassing
cough - am getting the
better of it. But I cough
deadfully at times.

So I cannot go to Boston
to see Redouté & L. about
the Brecca of which you
sent leaf [the broad-leaved Fort-Motte Plant]
Bkt. Mag. t. 200 would
seem to be that plant.

Check them. You have
the whole of it in the cita-
tion. No figure.

At College Library I
will look, if you wish, at
Trans. Entom. t. 37, which
Linnaeus cites in 2nd ed.
28p. M.

But the *Y. filamentosa*
Planely stat - in ed. 1 -
on *Equisetum* plant
"Virginia" & "foliis lanceolat-
is acuminatis".

I have no note of there
being any specimen in
Hb. Linnae.
